Company profile

mindcore.

From first idea to production.

A studio that builds software to last.

MindCore Studios designs, builds and runs software for businesses and founders: SaaS products, AI workflows, booking systems, industry platforms and mobile apps. We are a team of 25+ people who have delivered 200+ projects for 50+ clients.

200+	25+	5+	50+
Projects delivered	People	Regions served	Happy clients

We build to production

A demo is the start, not the finish. Everything we build is designed to be run: tested, deployed to your own cloud account, monitored, and handed over with documentation your team can use.

We say what we would do

If an off-the-shelf tool fits, we tell you. If a prototype is worth keeping, we keep it. Recommendations come with the tradeoffs behind them.

You own everything

Your code lives in your repository and your product runs on your accounts. You can change teams without asking anyone's permission.

Where we work

We work with teams in the United States, Canada, Australia and Europe, with overlap hours agreed at the start of each engagement.

Software for the way you work.

From a new product to an AI-built prototype that needs to go live, we design it, build it and keep it running.

SaaS and AI SaaS

SaaS and AI products built around your customers, from the first release to the version that pays for itself.

AI workflows and agents

Automations and AI agents that work with your data and tools, with approvals where a mistake would cost you.

Websites and booking systems

Fast websites and booking systems that turn visitors into confirmed appointments, built for search and easy to update.

Industry CRMs and portals

CRMs, customer portals and back-office systems shaped around how your industry works, not around a generic template.

Mobile apps

Mobile apps for customers and field teams, with dependable integrations and a release process you can run.

Prototype to production

Your Lovable, Replit or Claude Code app, made safe for real users: access, data, deployment and someone on call.

Cloud and AWS

Infrastructure that behaves: deployment, access control, backups and monitoring on AWS, sized to what you actually run.

Not sure which?

Tell us what you need on a 30-minute call and we'll say what we would build.

Products you can start with.

Built once, adapted to your business, and run on your own cloud account.

AI Digital Twin

Your expertise as an AI your clients can talk to, under your own brand.

AI Digital Twin turns an expert's methods, courses and material into an AI that clients can talk to, under the expert's own brand. It answers in their approach rather than generic advice, runs on your own AWS account, and includes setup in the first year.

$10,000
first year, setup included

$5,000
a year after that

Hosting on your own AWS account

Dispatchboard

Every open ServiceTitan job and every technician's zone, on one map.

Dispatchboard puts every open ServiceTitan appointment and each technician's zone on one map. Dispatchers assign and reschedule jobs, see optimised routes with miles and minutes, and get warned when an assignment breaks a house rule. Changes go straight back to ServiceTitan.

$10,000
first year, setup included

$1,000
a year after that

Built in your industry's vocabulary.

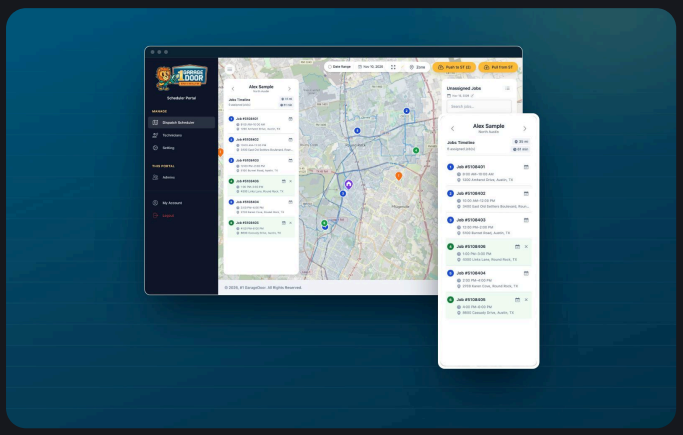

We start where the work happens: the jobs, forms, rules and handovers your team already knows.

Field and trade services	Dispatch, booking, payments and customer portals for trade and field service businesses.
Healthcare and care	Booking, communication and care operations software built with privacy and compliance from the start.
Environmental and EHS	Field, lab and reporting software for environmental, health and safety firms.
Manufacturing	Shop-floor tools, testing software and product websites for manufacturers.
Coaches, experts and education	Learning platforms and AI products for coaches, experts and educators.

More industries are on the way. If yours isn't here yet, the same approach applies.

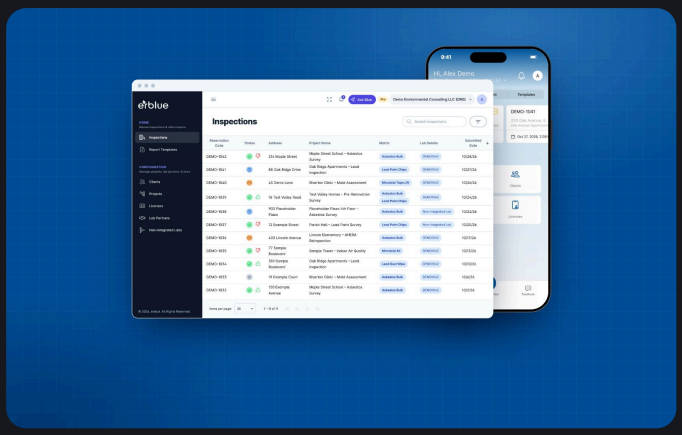

Selected work.

Products we have designed, built and run for our clients.

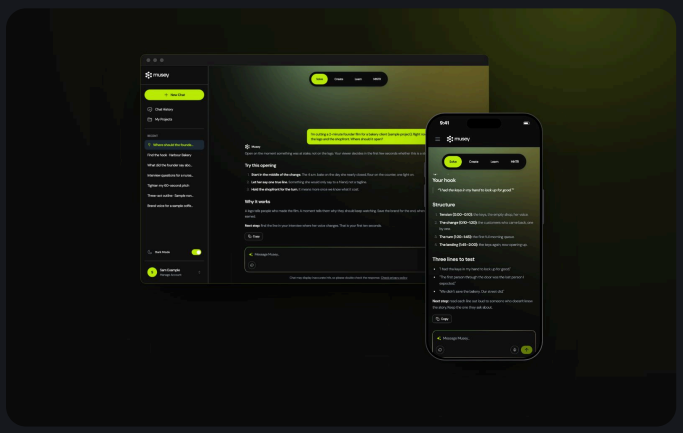

1GarageDoor scheduler and dispatch

Field and trade services

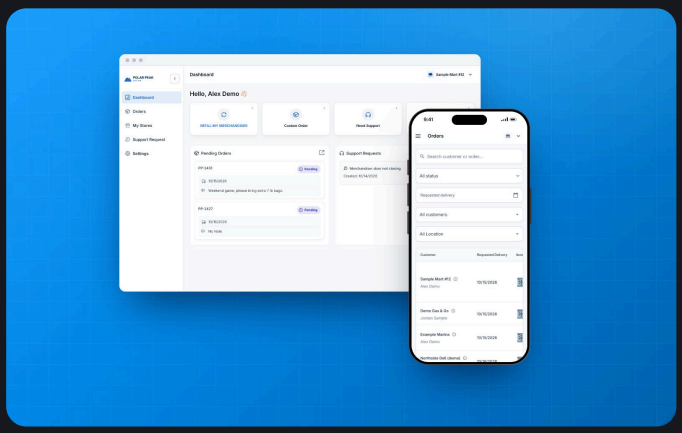

erblue inspector portal and app

Environmental and EHS

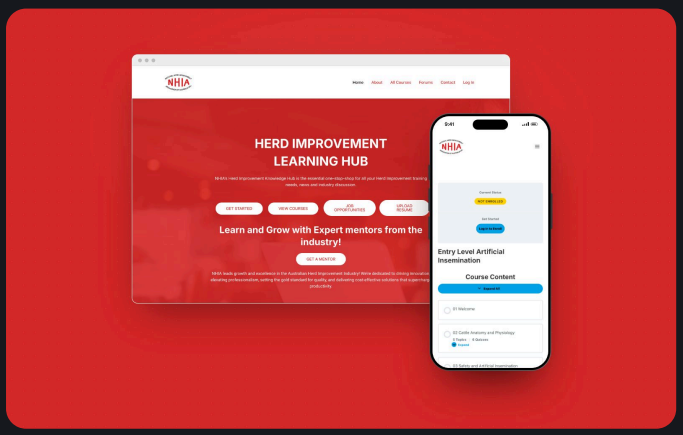

Musey AI twin

Coaches, experts and education

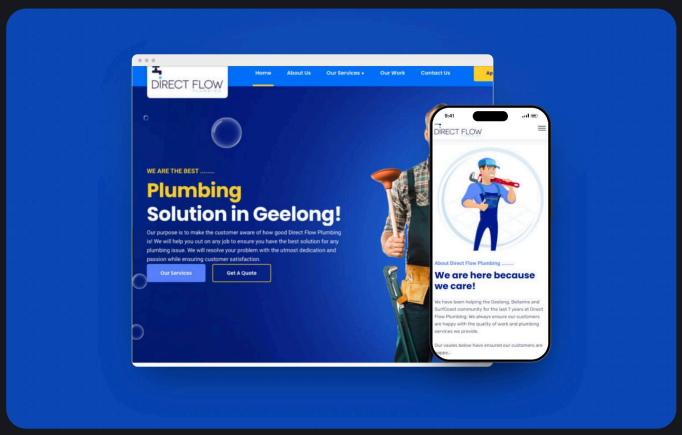

Cool Running licence and ordering portal

Manufacturing

NHIA Herd Improvement Learning Hub

Coaches, experts and education

Direct Flow Plumbing website

Field and trade services

How we take it to production.

The same four steps whether we start from an idea, a prototype or a system that keeps breaking.

1 **Assess**

We review the code, architecture, data access and integrations, and tell you what to keep.

Code and architecture review · data access audit · what to keep, fix or rebuild

2 **Strengthen**

Authentication, permissions and data rules get fixed, with tests where they matter.

Authentication and roles · data rules · tests for the journeys that matter

3 **Deploy**

Environments, CI/CD and AWS infrastructure, with a rollback plan.

Staging and production · automated deployments · a rollback plan

4 **Operate**

We monitor, maintain and keep improving it after launch.

Backups you have restored · alerts and monitoring · updates

Ways to start

Sprints

$4,500

per two-week sprint · Two-week delivery cycles

AI-Native MVP

$9,500

one-time engagement · 15-day target for an agreed MVP scope
